

DEDICATED **INTERNET** ACCESS (DIA)

Fully Managed, Highly Available Internet Connectivity

eStruxture's **Dedicated Internet Access** solution is built on a strong foundation of high-quality upstream transit and direct peers acquired through our participation in leading Canadian Internet Exchanges. Our service leverages a best-in-class, carrier-grade network that provides end-to-end redundancy with no single points of failure. Typical enterprise use cases of DIA include: internet connectivity, out-of-band site access, back-up management, VPN, and various others. eStruxture's DIA service is available across our entire data center platform.

SPECIFICATIONS

- Speeds from 100Mbps to 10Gbps
- Symmetrical, low-latency bandwidth
- 100% fiber-optic network backbone
- Geographically redundant IP routing cores
- High-availability design options such as VRRP, LACP, and BGP
- IPv4 and IPv6 dual-stack supported
- Live traffic graphs accessible through our customer portal
- 24/7 support and proactive monitoring
- IP leasing available

WHY CONSIDER BUNDLING DIA WITH YOUR COLOCATION?

Value: all eStruxture DIA bundles include a /29 address assignment, a cross-connect, and, when necessary, a BGP session. Our competitive pricing is based on the upstream blend included with the service.

Ease of use: Simplify your colocation services by consolidating them under one provider and a single invoice.

Exceptional support: enjoy 24/7 support provided by our highly skilled network engineers.
